

CODE BLOCKS

Problem

Learning programming can be challenging because of its complexity the abundance of text in programming. This is particularly true for children or people who get tired when reading lots of text.

Solution

By breaking down lines of code into smaller blocks, commands and variables become easier to read and manipulate. Our customizable approach maintains complexity without sacrificing clarity.

Code Blocks

Each block holds a custom QR code that stores a piece of code. Blocks are ideally colored by type, but that's your choice to make.

Start Button

Runs the program when pushed.

Camera

Reads the QR codes on the bottoms of the blocks.

Raspberry Pi 4

The brain of the whole device. Turns your blocks into code.

LCD Display

Outputs whatever your program tells it to. Who knows what you'll make?

WHAT CAN IT DO?

Runs Python code created from your arrangement of blocks

Make new functions from device memory or phone

Usable with larger grids

Educational Products

"Building wheels for the engine of creation."
